TITLE : ACETAL RESIN COMPOSITION

ABSTRACT : PURPOSE: To provide an acetal resin composition capable of giving a molded product excellent in surface appearance, obtained by adding at least one specific compound of alkali (alkaline earth) metal and at least one of organotitanate and organosilane to an acetal resin.

CONSTITUTION: At least one of hydroxide, inorg. acid salt, carboxylate and alkoxide of Na, K, Mg, Ca and Ba (A) and at least one of organotitanate (e.g. isopropyltriacyltitanate) and organosilane (e.g.  $\gamma$ -chloropropyltrimethoxysilane) (B) are added to an acetal resin in a weight ratio of about 100:0.1~20. That is, compounds A and B are compounded in 100pts.wt. acetal resin in a ratio of about 0.004~5pts.wt. as a total amount and the obtained compound is kneaded by using an extruder or a kneader to obtain an acetal resin composition.
